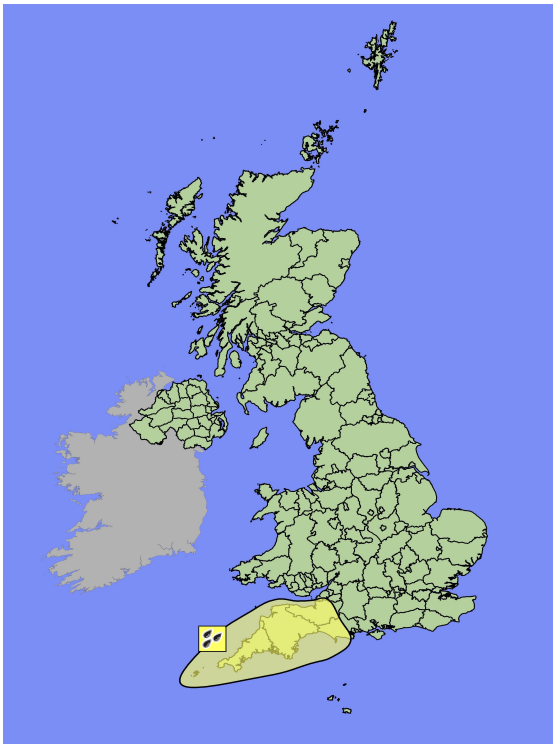
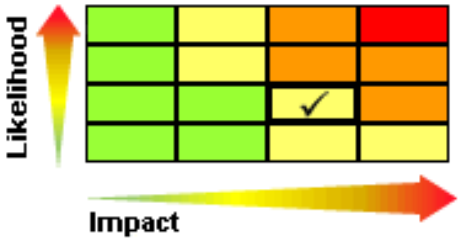
National Severe Weather Warning Service





Chief Forecasters Assessment
Outbreaks of rain will extend across the southwest of England on Sunday night and persist into Monday, with the potential for some heavy rain to occur in places. There remains uncertainty in the location of any heavier rainfall and, although this could occur anywhere within the warning area, at present the Isles of Scilly, as well as parts of Cornwall and Devon look the most probable areas for this to occur.
10-20 mm of rainfall is likely to fall fairly widely through Monday but, with as much as, 50 mm in a few locations. Due to the ground being saturated after recent wet weather this may lead to localised flooding.

Given the uncertainty over the detail, the Public are advised to monitor forecasts closely and visit the web site for any updates.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:00 on Mon, 08th Oct 2012** until **23:59 on Mon, 08th Oct 2012**

Further spells of rain, some heavy, are expected to affect more southwestern parts of England during Monday.

Following the recent wet conditions, the public should be aware of the risk of possible disruption to transport and localised flooding.
